

NDEWS National Drug Early Warning System

Funded at the Center for Substance Abuse Research by the National Institute on Drug Abuse

NDEWS is designed to monitor emerging drug use trends to enable health experts, researchers, and concerned citizens to respond quickly to potential outbreaks of illicit drugs such as heroin and to identify increased use of synthetic compounds. NDEWS components are designed to detect, monitor, and follow up on emerging drugs and drug trends to develop a more complete and accurate understanding of drug use in our country. Visit ndews.org for more information.

The NDEWS Network is a virtual community of researchers, practitioners, and concerned citizens across the United States and in many other countries. This Network offers a forum to share and discuss information about emerging drugs and changing drug use trends, as well as to assist with local NDEWS research. Go to ndews.org/resources/join-ndews-network for instructions on how to join the Network.
